

OUR MISSION STATEMENT

German Federal Institute for Risk Assessment

The protection of human health
is at the centre of our work.

Through our independent scientific assessment, research and the transparent communication of health risks, we make an impartial contribution to the safety of foods and feeds, products and chemicals.

We research and advise in order to minimise animal experiments to an essential minimum and to guarantee the best possible protection level for laboratory animals.

The results of our work promote a factual and social discourse, thus providing decision-makers with a scientifically well-founded basis.

Our work is characterised by an open and respectful approach. Tolerance, reliability and mutual appreciation form our common foundations.

On this basis, we set scientific standards in consumer health protection so that the world becomes a safer place for people to live.

About the BfR

The German Federal Institute for Risk Assessment (BfR) is a scientifically independent institution within the portfolio of the Federal Ministry of Food and Agriculture (BMEL) in Germany. It assesses the health risks of foods, consumer products and chemicals and prepares recommendations on how these risks can be minimised. Within this work, the BfR makes a decisive contribution towards protecting consumer health.
